<u>Psychology & The Web </u>

<p class="lead">
After studying psychology and being involved in clinical research, I found that my place was creating through programming. I enrolled in various classes and found web design and development was what I enjoyed the most. I took it upon myself to learn more through online courses in order to create better and better web projects. Bringing my knowledge of psychology and the web, I create websites that are engaging, efficient, and contain a little creative flair. I am looking to take all my experiences and apply them to the world to create web applications.
</p>
